

25.10.08 – FOR IMMEDIATE RELEASE

TRACPLUS ADOPTED BY NEW ZEALAND FLIGHT SCHOOLS

DUNEDIN, NEW ZEALAND, October 25, 2008 –TracPlus Global has today announced that six further flight schools throughout New Zealand have selected TracPlus as their tracking solution of choice.

Garden City Helicopters, Ardmore Flying School, Bayflight International and Mainland Air are amongst six flight training schools that are fitting their training aircraft with the revolutionary flight tracking system.

"TracPlus has proved invaluable in our rescue helicopter operations and therefore it was a simple and straight forward decision to install TracPlus in the helicopters we use for flight training" said Simon Duncan, General Manager of Garden City Helicopters.

"It allows us to keep a watchful eye on our students doing cross-country flights. In the past we could only assume they flew their planned route. Now we can actually see where they've been and it provides outstanding detail for our debriefs" said Duncan.

TracPlus Global CEO Chris Hinch has acknowledged the importance of live flight tracking for students learning to fly.

"TracPlus significantly enhances the safety of students undertaking solo cross country flights, which can present a daunting challenge to ab initio pilots. TracPlus allows instructors to monitor their students in real time, even though they may be hundreds of kilometers away – and determine that their charges may be off course before the student is even aware that they have a problem" said Hinch.

"And should the worst happen, TracPlus can quickly lead emergency services to a crash site, effectively taking the 'search' out of 'search and rescue'. That faster response may well mean the difference between life and death." concluded Hinch.

TracPlus has delivered aviation, maritime and terrestrial tracking services to private and commercial operators, companies, government agencies and emergency services around the world since the product was officially launched in August 2007.

About TracPlus Global Limited

TracPlus Global Ltd is a next generation Tracking Service Provider, delivering seamless, reliable and secure real time global tracking, sensor monitoring and data analysis services to private, business, military, and government organizations worldwide, using guaranteed mission critical hosting infrastructure.

The TracPlus product and service occupies a unique position in the global telemetry market. In a global market where new tracking hardware is announced daily,

TracPlus is the only tracking service designed to work with any OEM tracking terminal, across any satellite or cellular network, and deliver data to a wide variety of client applications including third party command and control systems.

TracPlus also sets a new standard in operator and agency interoperability, allowing users to easily and securely share data with each other, enabling emergency response and rescue coordination agencies to visualize time critical tracking data in the systems of their choice, regardless of the source of that data.

TracPlus Global won the International Technium Challenge in 2008 and was chosen as the Gen-I Startup Exporter of the Year in August. In September, TracPlus Global won the TUANZ Initiative of the Year, and was chosen as the Overall Winner in the TUANZ Innovation of the Year.
